WHAT TO DO WITH THIS BOOK

Use it! Take it to class, to clinic, to Clinical Theater and Clinical Rounds. Take it to the john, to the market, to the limit. Write in it, scribble on it, deface it - - it is designed to be written on, it adores abuse - - but do *use* it. What you most definitely do not want to do is to leave it on the shelf next to those Hare Krishna books you never got around to reading.

This book is designed in a way to help you make sense and order out of the seemingly infinite and random amount of information about acupuncture points. Before you feel completely overwhelmed by the amount of information catalogued, read the section on **How to Study**.

The Acupuncture Point Book can be used as an expandable reference where you can spend the rest of your career tucking in those odd bits of information that keep popping up about points. Where else will you find just the right point for "sounds in the throat like a duck" (L.I. 18), or the stripper point for "wants to undress in public"? (St 42) Isn't it important to know which point was once believed capable of making your patient "turn green and die"? (Ht 2) We have to say - - no matter how odd or bizarre some of these indications sound, we did not make up any of them. (Tempting though it was.)

On the next page is a sample page of how each point is laid out. If you're learning all this for the first time, turn to the "How to Study" section before you make yourself completely bonkers trying to learn all this detail. And remember - - you're going to forget and relearn this material many times over before you really can make it your own, so don't be discouraged!

THE SAMPLE PAGE

The book "Acupuncture: A Comprehensive Text" forms the basis for how this book is laid out, but we have included functions from several other texts (See Functions.) We have tried to capture the gist of the meaning of the function as given by each of the sources used for this book. But, we are health care practitioners, not Chinese linguistics scholars, and those who worry about the linguistic differences between tonifying, nourishing, benefitting, supporting, improving, augmenting, strengthening, promoting, supplementing, boosting, and aiding the function of an organ would do best to study from the original sources. However, you don't need to read Chinese in order to be a good practitioner, any more than you need to read German in order to drive a BMW.

Indeed it is not our intention in any way to replace *any* of those original sources - - rather, , we wish to give you a working text that pulls it all together for you on one page that you can continue editing and updating as you acquire more information. (And more. And more. And more....)

At the beginning of each channel is a Channel Summary that sums up the primary, Luo, divergent, and muscle channels on one page. This information is all from the Comprehensive text, it's just harder to get to in that book. (We've frequently had to leave a trail of bread crumbs behind us while going into the Comprehensive text in order to find our way out again.

For you masochistic types we have included some further tests in the back section of the book.

Point Number "Translated Name" *Pinyin*

Type of Point (Jing well, Source point, etc.)

LOCATION: Point locations are based on information from *Chinese Acupuncture and Moxibustion (CAM)*.

IMAGE: Point names usually refer to either the point's anatomical location or it's function, but some names reveal other historical or cultural facts. Knowing & understanding the name of the point can often help you remember either it's location or usage. We used a variety of sources in delineating point names. (See Bibliography.)

FUNCTIONS: Information on point functions come from:
Acupuncture, A Comprehensive Text.
Illustrated Dictionary of Chinese Acupuncture Fundamentals of Chinese Acupuncture
Acupuncture Points: Images and Functions
Dr. Richard Liao
Dr. Richard Shwery

INDICATIONS: These are mostly from *CAM* and *Acupuncture, A Comprehensive Text*.

NEEDLING: Needling information is from *CAM* and *Acupuncture, A Comprehensive Text*.

PSYCHO-SPIRITUAL USES: This would include emotional uses for points. Special thanks to acupunk extraordinaire Lonny Jarrett for his help in this realm. Many of the point references here come from him.

POINT COMBINATIONS: Taken from various sources. Send us the ones you like.

ANCIENT USES: These are uses that are not commonly used clinically today.

OTHER: The first, boldfaced line of this section usually tries to summarize or differentiate the important points.

This is where information from all other sources comes in. Our main source here is Dr. Shwery, who also refers to Felix Mann, Dr. Voll, Dr. So, the *Beijing* text, the *Nei Jing*, and other sources. The J. C. Darrus information was given to us by Peter Holmes. Also included is information from our other doctors we have observed and spoken with, and includes Dr. Liao's translations from Chinese texts not yet available in English.

HOW TO STUDY

Self-evaluation and grades are not important,
Serving the patient is important.
Simple and genuine,
Let your training be your compass.
Respect yourself
Learn to listen
And remain open.

- - Dara Eitrem

Studying TCM is primarily the practice of learning to think in patterns, to make connections between seemingly unrelated events. When we were first students of TCM (in the early Han Dynasty), a theory professor told us that the study of TCM is a circle, and the information is often confusing and disconnected until you've been around the circle one full time - - which takes a year or two. This is no exaggeration. So if you find yourself totally confused after nine months of brain-grinding, Spleen-drenching study, not to worry.

The first time around the material you're learning a new language, a new way of looking at the world, a new way of organizing signs and symptoms. You get a pencil-sketch of the material. The next time around, more details get filled in, more understanding and clarity comes, and you have a fine pen-and-ink drawing. As your understanding deepens, the drawing becomes more lush, more detailed, more rich and multi-colored.

Or, to use a less prosaic example, learning this material is like peeling an onion, starting with the hardest and most superficial layer, and then with each subsequent layer, getting down deeper into the core of it all. Our point here is this-- when first beginning to study points, start with generalities. Get the big picture first, the overview, of how the different categories of points behave. **DO NOT MEMORIZE LISTS OF DETAILS OR YOU WILL MAKE YOURSELF CRAZY.**

We knew a young man who started out trying to learn every single indication for every point. He made mnemonics for each list of indications, like the ones you make to memorize the eight cranial nerves or the wrist bones. He went stone cold bonkers and dropped out by the end of the first year. His wife divorced him, his dog left him, and now he can't even get out of his own way. Don't let this happen to you.

Seriously. Trying to memorize lists of things you don't yet understand won't work, unless you're cursed with a photographic memory. (If you are, just stick with it and see what develops.)

START WITH GENERALITIES First, of course, learn the locations of the points. Location will tell you a lot! Points located further away from the trunk of the body get progressively stronger. The points furthest away, the **Jing Well** points, are for reviving consciousness, draining heat, and general bad craziness. You'll be needing those yourself, soon enough.

The next points up, the **Ying Spring** points, are for fevers and draining very strong heat. **Source** points tend to congregate around wrists and ankles, and are more tonifying, or for chronic problems. **Xi Cleft** points, usually in a deeper depression halfway between the wrist and elbow, or ankle and knee, are just the opposite-- for very acute, excess situations. **He Sea** points around the elbows and knees have more to do with internal organ functioning, especially fu organ (bowel) disturbances. (See the "Summary of Special Points" charts at the end of this section for further breakdown of point types.)

This is just a quick overview of how a point's location and category can help you reason out what that point can do. Then, add in what the meridian itself usually does, which will always take you back to basic TCM physiology. For example, the Kidneys have an effect on the bones, the ears, the

low back and knees, and the hair. The Source point of the Kidney (Kid 3) has the functions of benefitting the Kidneys and strengthening the low back and and knees, and its indications are for toothache (bones), tinnitus (ears), alopecia (hair), and low back pain. Next, once you understand the meridian's function, and the function of the type of point, then look to the point itself.

Again, don't memorize details, such as every single indication. Memorizing lists of indications (this point for a cough, that point for a bloody nose, etc.) is a westernization of Chinese Medicine and is considered bad mojo. Points are indicated by their functions, because in TCM a cough can be caused by damp phlegm or yin xu dryness, and a bloody nose can be caused by excess Lung heat or Spleen Qi deficiency. Isolated Symptoms don't tell you much-- it's the diagnosis that counts, and remember the point here is to be learning patterns of symptoms and how they fit together to form a syndrome.

The functions of points, then, correspond to the **diagnosis** (Clears Liver Qi stagnation, etc), while the indications are the **symptoms** that flow from the diagnosis. (Many varied symptoms, or indications, can come from Liver Qi stagnation.) At first, the lists of indications can seem bizarre, unrelated, and strange. (As for us, this is why we got into this in the first place.) But each one ties into a function, or diagnosis, above. So - - learn the functions first, and the understanding of the indications will follow.

Here's an example of differentiating points on the Lung channel. At first, they all seem so similar. How do you know which point for cough, or pneumonia, or asthma? Looking at the indications alone only overwhelms and confuses you. But here's one way of breaking it down, by point location and functions:

Lung 11: The furthest one away, and it's for bad craziness (psychosis), reviving a person, and very strong heat in the throat-- not just sore throat, but tonsillitis.

Lung 10: As a Ying Spring & Fire point, it's also going to be very cooling and for fevers. (Check the indications.) The function says Cools Heat in the Lungs, but it's the more surface aspect of heat-- sore throat, hoarseness.

Lung 9: As a source point, this will be for more chronic deficiencies of the lung-- and you can also see that this is the only point on the channel that "Transforms Phlegm." This gets into more chronic, longstanding coughs. This isn't the person with a sudden common cold or acute pneumonia-- this is the person who's had the chronic damp bronchitis for several weeks.

Lung 7: Shows up as the main point for Dispersing Wind-- for external Wind affecting the Lungs. Notice how the indications are all external Wind related-- common cold (headache, coughing), urticaria (hives, or "wind rash"), and facial paralysis, also seen as a wind-created phenomena. Note also the point's other function of Meeting point of Ren channel, paired with K-6. This means it will be used with K-6 for sore throat.

Lung 5: As a He Sea point, this is going to relate less to the surface functions of the Lung (like Lu 10 or Lu 7) and have more to do with problems gone deeper into the Lung itself. The function says Drains Heat in the Lungs, and you find deeper heat problems like acute asthma, pneumonia, bronchitis. Maybe Lung 7 didn't work, or the Wei Qi lost the battle, and now the external pathogen has vaulted past the surface and has lodged deeper within.

Lung 6: As a xi cleft point, this will have the most excessive symptoms, and the function says, Cools Heat & Stops Bleeding. Not only has the heat gone deep into the Lungs, there's now reckless Blood, and the person is coughing or spitting blood-- a much more serious sign.

Going over the channel in this very broad and general way starts to give you a feeling of the personality of each point, a sense of each point's special talents, as it were. Like members of a family, all the points on a channel, or all Luo points, or all Fire points, will have a resemblance to each other. And, like members of a family, each point will also have it's own unique (and sometimes

bizarre) contribution to offer. If you memorize indications at all, only memorize the ones that differentiate that point from the others, something that particular point does that no other does quite as well.

And this is where the learning in layers comes in-- it takes some time and clinical experience to some of these things out. Later on, you will have to memorize more indications-- memorizing vast chunks of information is an unavoidable aspect of becoming a TCM practitioner. Which is why those Chinese doctors in the old drawings have such huge, rounded foreheads. (And you thought it was Jing lumps.) But, if this is your first time through the points, get an understanding of the basics-- don't jump in memorizing lists. Subsequent passes at the information will yield more detail.

COMPARING POINTS ON DIFFERENT MERIDIANS

Once you've gone through and compared and contrasted points on the same meridian, a great exercise for later on (towards Midterms, for example) is to put all the points with similar functions together, and compare and contrast them. Put together all the points that aid digestion, or water imbalances, or stop cough, and see what tells them apart. Remember that each point is a unique entity. (Check the back of this book for a midterm and final that test you by the point's general classification - - differentiating the water points, the spirit points, the digestive points, etc.

For example, there are points all over the body that Calm the Spirit. A breakdown of some of them:

Ht 7	Calms Spirit	AND	is a major point for insomnia, anxiety
Ht 5	Calms Spirit	AND	is for speaking difficulties like stuttering; also for bradycardia.
P 6	Calms Spirit	AND	helps nausea, vomiting, stomach and chest pain.
Kid 1	Calms Spirit	AND	is for reviving consciousness and shock, as well as seizures and psychosis
St 40	Calms Spirit	AND	Transforms Phlegm & Dampness-- for coughing and mucous

This compares just a few points, but you can see how each one is unique. Again, memorize only enough indications to help you differentiate what's special about each point. We recommend making cross-reference lists of similar points so that you can learn to tell them apart.

For some people, learning the point name and translation will also be a good memory aid. Point names tend to refer to either the point's location or its function, and if the name stands out in your mind, use that to your advantage. (Don't go out and think the names are one more thing you have to memorize, though! Just use it if it's helpful.)

Associating the point with a person you know who really needs it can be very helpful. Oh yeah, crazy Aunt *Jane's* point, how could I ever forget it!

UTILIZE ALL YOUR SENSES

According to certain learning theories, people have a preferred mode of dealing with the world-- visual, auditory, or kinesthetic (touchy-feely). We say that the more you engage all your senses in learning, the better the chance of information sticking to you.... somewhere....

VISUAL

For example, we color-coded these pages according to their elements to aid visual memory. You can take this a step further by putting a colored dot on each page that has an element point on it-- a

red dot on the fire points, etc. (Every time we think of St 41, we automatically see a red dot. We don't have to actively recall it as a fire point anymore, we just *see* it.

Another visual aid to learning this is to make your own transparencies, just like those great old anatomy books with the colorful overlays. Draw a figure, or trace one out of an anatomy book, and draw the meridian over the model. Then layer over a transparent sheet of plastic, and draw in the points, color-coding the transport points. Then, lay another transparent plastic sheet over that, and draw in the Luo and muscle and divergent channels. Even though these things are all included in your textbooks, doing it yourself makes it yours, both physically and visually, and the transparent overlays are invaluable for later review.

When you're studying the point, visualize very clearly where it is. Imagine the points popping up on your friends' skin. Visualize the functions of the points. The wilder and more bizarre the image, the more likely it is to stick. (Sexual references seem to be the easiest to remember). If the point clears fire in the throat, imagine flames licking at someone's Adam's Apple, and the point opening up a waterfall that sends up a cool fountain of clear, sparkling water that douses that flame. The language of Chinese medicine is rich in natural imagery-- use these metaphors to aid your understanding and memory!

Make flow charts, diagrams, flash cards-- anything to represent the material in a way that's visually catchy for you. No textbook is going to capture it for you like your own drawing will.

When learning point locations, visualize the points in relationship to each other, not just how they line up along the meridian. Study horizontally as well as vertically-- for example, study all the points around the knee point, or the row of points at the level of the umbilicus, or those that form a line across the neck.

AUDITORY

Reciting the point out loud makes you hear what you're saying more than just repeating it silently to yourself. Learn to talk to yourself. One student we knew made auditory tapes of what he wanted to memorize, and listened to them as he worked in the garden or drove his car. For him, this was very useful. (Be careful doing this in public places, though, as you will immediately be pegged as either an acupuncture student or a lunatic. An unfortunate reputation, in either case, and not the type of thing you want to get around.)

Other things you can do is sing the points, or make up nonsense rhymes about them. This is where being in a study group is very valuable-- being able to bounce your ideas off of other people, instead of the walls.

Learn the "phone numbers" (this *is* useful to memorize), and be able to rattle them off without thinking. The phone numbers are the numbers of the transport points. The phone number of the Lung, for example, is (976) LU-11-10-9-8-5. (See the first page of "Summary of Special Points.") Knowing the phone numbers will help you quickly figure out five element treatments, and it will help you to figure out source, Luo, and xi-cleft points. Verbally rehearse the phone numbers until they are a conditioned reflex. Quiz each other verbally on them. Try them on the telephone and see if Hua Tou answers.

KINESTHETIC

TOUCH the point whenever you're talking about it or visualizing it. Let that touch become completely synonymous with the point's location. Get that point into your body's memory! If you're advanced enough, needle the point - - hurting yourself is an incredible memory aid.

TRACE the outlines of the meridians on your body, or on a willing partner's. (This could get interesting.) If you're going to trace out the Lung channel, start with your hand on your stomach, and trace downward into the lower burner, following the internal pathways, before coming back up and tracing the meridian along your arm. Do this every time you study the channel, until you not

only see it, you feel it, as well. Repeat out loud to yourself the course of the channel as you trace it and internally visualize it.

We found that walking on a beach or in a park, or through the woods while reciting information aloud was more helpful than sitting in a chair reciting. Getting some movement in there helped a lot. We knew one student who danced to the points! Be creative!

STUDY SESSIONS

Remember that your attention span is only about 20 minutes long before your mind takes a vacation to the Bahamas. When studying, take frequent breaks. We have always operated on a reward system-- allowing something fun or different at least once an hour. We would take a break every hour to read a chapter out of a comic novel. Or, take frequent breaks to work on fun stuff related to TCM, like calligraphy, or playing with herbs-- something you want to learn, and aren't being temporarily forced to memorize for a test.

Memory consolidates overnight. Do a brief overview of the material before going to sleep and glance at it again in the morning. You'll be amazed at the new insights and understandings that can come out of a good night's sleep. (If, however, studying too close to bedtime prevents you from sleeping, then don't try this at home!)

Review often. Review frequently. Review over and over. We can't reiterate or repeat this one enough times. (For advice, call your local Department of Redundancy Department to see if you should review again. If they say no, do it anyway.) Take tests over and over again; make up your own tests. Make up quizzes for each other. Go back a week later and take them again. You will forget this stuff over and over again. It's completely normal and natural for your mind to periodically flush out what it thinks it doesn't need. (That's why they invented Mental Floss.) You have to keep re-entering that data until it's permanent. Eventually, your worst concern will be how to *forget* it all.

Study groups are incredibly important. Study with people you like for a more painless review session. Study with people you don't like-- maybe you'll get more done, and learn to like them in the process. Learn as much as you can on your own and then review with your study group when you just can't face the material on your own anymore. Our study groups operated on a ratio of about 50% study and 50% gossip - - just the right mix. We always got a lot done and supported each other in the process.

Help each other. Cooperation always works better than competition in an adult classroom environment and makes the learning process so much more pleasant. Share notes with each other and give each other feedback and frequent massages.

Talk to students who are a year or two ahead of you. They will have developed their own systems and methods of coping, and we can guarantee they will be very happy to share their insights and study methods with you. More advanced students will be happy to act as models for you to locate points on, or study partners to review with-- they have to keep reviewing the material, too, and since it's more fresh in your mind, you can help *them*

One of the best ways to really learn something is to teach it to someone else. Someone who's not getting it as quickly as you, someone in a more beginning class, someone who's just plain interested. Teaching it really makes it yours.

And making it yours is the best memory aid of all.

TALK TO US

Let us know how this workbook works for you. Write us and tell us your favorite study tips. Point out our errors so we can correct them for the next edition. Tell us what you'd like to see included in the future. Send us the details of what happened when you traced the meridians on your friend's body.

Remember, you've got to want this material, but don't let being a student ruin your life. When you get burned out on studying, take a break. Go see a movie, go swimming-- *reward yourself* for your hard work.

When you're out in the world practicing acupuncture, no one's going to care what your grades in school were. This is so obvious that we sometimes fail to see it. Good students sometimes make bad doctors, and those not as academically inclined frequently turn out to be tremendous healers. It's the way we are with people that determines what kind of practitioners we will become.

Finally, you've got to believe in yourself. None of this will matter in the long run without a firm belief in what you're doing and in your own ability to use the medicine.

Study hard, give yourself plenty of slack, and don't forget to breathe.

Arm Greater Yin Lung Channel

PRIMARY CHANNEL

Begins in the region of the Stomach or Middle Burner and passes downward to connect with the **Large Intestine**. Returning back upward, it crosses the diaphragm and enters its associated organ, the Lung.

Emerging transversely from an area between the Lung and the throat, it descends along the anterior aspect of the upper arm. Reaching the elbow, it continues along the anterior aspect of the forearm to the anterior margin of the styloid process at the wrist. From there it crosses the radial artery at the pulse and extends over the thenar eminence to the radial side of the tip of the thumb.

A branch splits from the main channel above the styloid process at the wrist and travels directly to the radial side of the tip of the thumb.

This channel connects with the **Large Intestine**, crosses the diaphragm, and is joined with the **Stomach, Kidneys**, and other organs.

CROSSING POINTS: The Spleen channel joins at Lu 1

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Fever and sensitivity to cold, nasal congestion, headache, pain in the chest, clavicle, shoulder, and back; chills and pain along the channel on the arm.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Coughing, asthma, shortness of breath, fullness in the chest, parched throat, changes in the color of urine, irritability, blood in the sputum, palms hot; sometimes accompanied by distended abdomen and loose stool.

DIVERGENT CHANNEL

Diverges from the primary channel at the axilla, then travels anterior to the path of the pericardium channel into the chest, where it connects with the Lung before dispersing in the Large Intestine. A branch proceeds upwards from the Lung, emerging at the collar bone. From here, it ascends across the throat where it converges with the Large Intestine channel.

LUO CHANNEL

Separates from the primary channel at **Lu 7**, crossing over to the Large Intestine at **LI 4**. Another branch follows the Lung channel into the palm of the hand, where it spreads through the thenar eminence.

Symptoms of Luo Excess: hot palms or wrist

Symptoms of Luo Deficiency: shortness of breath, frequent urination, enuresis

MUSCLE CHANNEL

Begins on the **thumb** and, after connecting with the thenar eminence, crosses the **wrist** at the pulse. Proceeds along the forearm, connecting at the **elbow**. From here the channel continues up the medial aspect of the arm and enters the **chest cavity** below the axilla.

Emerging again in front of the **clavicle**, the channel connects at the front of the shoulder. Above, it connects with clavicle, and below it connects in the Lungs, **spreads over the diaphragm**, and converges again at the **lower rib**.

Pathological symptoms : Stiff, strained, or twisted muscles and pain along the course of the channel, in serious cases, muscle spasms over the area of the ribs; spitting blood.

Arm Yang Brightness Large Intestine Channel

PRIMARY CHANNEL

Begins at the radial side of the tip of the index finger and proceeds upward between the first and second metacarpal bones of the hand. Passes between the tendons of the extensor pollicis longus and brevis at the wrist and continues along the radial margin of the forearm to the lateral side of the elbow. Rises along the lateral aspect of the upper arm to the shoulder joint, then crosses behind the shoulder following the anterior margin of the acromion before turning upward. **Just beneath the spinous process of C-7**, the channel enters directly into the supraclavicular fossa and connects with the **Lung** before descending across the diaphragm to the **Large Intestine**.

A branch separates from the main channel at the supraclavicular fossa and moves upward through the neck, crosses the cheek and enters the lower gum. From here it curves around the lip and intersects the same channel coming from the opposite side of the body at the philtrum. The branch finally **terminates at the side of the nose**.

Another branch descends to **St 37**, the Lower He Sea of the Large Intestine. Channel connects with the Lung and also joins directly with the Stomach.

CROSSING POINTS: DU 26, DU 14, SI 12, TB 20, St 4

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Fever, parched mouth and thirst, sore throat, nosebleed, toothache, red and painful eyes, swelling of the neck, pain along the course of the channel on the upper arm, shoulder, and shoulder blade, motor impairment of the fingers.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Abdominal pain, intestinal noises, loose stool; sometimes accompanied by shortness of breath and belching.

DIVERGENT CHANNEL

After separating from the primary channel on the hand, this channel continues upward across the arm and shoulder to the breast. A branch diverges at the top of the shoulder, enters the spine at the nape of the neck, and proceeds downward to join with the Large Intestine and Lung. Another branch ascends from the shoulder along the throat, emerging at the supraclavicular fossa where it rejoins the primary channel.

LUO CHANNEL

Separates from Primary channel at LI 6 on the wrist and joins with the Lung channel at Lu 9. Another branch follows the arm to the shoulder, crosses the jaw and extends to the teeth. Another branch separates at the jaw and enters the ear region.

Symptoms of Luo Excess: toothache, deafness

Symptoms of Luo Deficiency: sensation of coldness in the teeth, fullness and congestion in the chest.

MUSCLE CHANNEL

Originates at the **tip of the index finger** and connects at the dorsum of the **wrist**. Ascends across the forearm and connects at the lateral aspect of the **elbow** the up the arm to connect at the **shoulder**.

A branch encircles the scapula and attaches to the **spine**. The main channel proceeds from the top of the shoulder to the neck where a branch separates and connects at the **side of the nose**. The main channel continues upward, anterior to the Small Intestine muscle channel, and **crosses over the head**, connecting at the **mandible on the opposite side of the face**.

Pathological Symptoms: Stiff, strained, or twisted muscles and pain along the course of the channel, inability to raise the arm at the shoulder, inability to rotate the neck from side to side.

Leg Yang Brightness Stomach Channel

PRIMARY CHANNEL

Begins beside the nose at LI 20, then ascends to the root of the nose where it intersects with the Bladder channel at **UB 1**. Descending along the lateral side of the nose, it enters the upper gum and joins the Governing channel at the philtrum at **DU 26**, then circles back around the corner of the mouth, meeting the Conception channel at the mentolabial groove on the chin at **Ren 24**. From here, it follows the angle of the jaw and runs upward in front of the ear. It proceeds along the hairline until it intersects the GB channel at **GB 6**. Finally, it crosses to the middle of the forehead, parallel with the hairline, where it joins the Governing channel at **DU 24**.

One branch separates from the main channel on the lower jaw and descends along the throat, entering the supraclavicular fossa. Here it travels posteriorly to the upper back, where it meets the Governing channel at **DU 14**. It proceeds downward across the diaphragm, intersecting the Conception channel at **Ren 13** and **Ren 12** before entering its associated organ, the Stomach, and connecting with the **Spleen**.

Another vertical branch descends directly from the supraclavicular fossa along the mammillary line, then passes beside the umbilicus and through the lower abdomen to the inguinal region.

Another branch begins at the pylorus and descends internally to the inguinal region where it joins at **St 30** with the vertical branch just described. It crosses to **St 31** on the anterior aspect of the thigh and descends directly to the patella. It then proceeds along the lateral side of the tibia to the dorsum of the foot, terminating at the lateral side of the tip of the second toe.

A parallel branch separates from the main channel at **St 36** and terminates at the lateral side of the third toe. Another branch separates from the dorsum of the foot at **St 42** and terminates at the medial side of the big toe, where it connects with the Spleen channel at **Sp 1**.

The channel connects with the **Spleen** and is directly joined with the **Heart, Large Intestine, and Small Intestine**.

CROSSING POINTS: LI 20, UB 1, DU 26, Ren 24, DU 14, DU 24, Ren 12, Ren 13, GB 3, GB 4, GB 6, Sp 1

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

High fever, tidal fevers, flushed face, sweating and delirium, sometimes sensitivity to cold, or pain in the eyes, dry nostrils and nosebleed, fever blisters, sore throat, swelling on the neck, facial paralysis, chest pain, pain or distension along the course of the channel in the leg and foot, coldness in the lower limb.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Abdominal distention, fullness or edema, discomfort while reclining, seizures, persistent hunger, yellow urine.

DIVERGENT CHANNEL

After diverging from the primary channel on the thigh, this channel enters the abdomen, connects with the Stomach and then disperses through the Spleen. From there, it ascends across the Heart and follows the esophagus until it reaches the mouth. It then continues upward beside the nose, and connects with the eye before rejoining the primary channel.

LUO CHANNEL

Separates at **St 40** and joins the Spleen at **Sp 3**. A branch follows the lateral margin of the tibia upward across the thigh and trunk to the top of the head, where it converges with the other Yang channels. Another branch separates in the neck and connects with the throat.

Symptoms of Luo Excess: epilepsy, insanity

Symptoms of Luo Deficiency: flaccid or atrophied muscles in the legs or feet, pharyngitis, sudden aphasia.

MUSCLE CHANNEL

Originates at the 2nd, 4th, and middle toes, crosses the dorsum of the **foot**, and slants upward along the lateral aspect of the leg, joining at the **knee**. Then crosses the **hip** and **lower ribs** before circling behind the body to connect with the **spine**.

Another branch separates from the first branch above the ankle and follows the tibia to the knee. A sub-branch crosses the head of the fibula, where it joins with the GB channel at **GB 34**. From the knee, the branch ascends across the thigh and connects again in the pelvic region, where it joins with the **reproductive organs**. Continuing upward across the abdomen and chest, the channel connects with the **clavicle** then extends up the **neck** and around the **mouth**, connecting at the side of the **nose**. Above, it joins with the Bladder channel to form a **muscular 'net' around the eye**. A sub-branch separates at the jaw and traverses the face, connecting in front of the **ear**.

Pathological Symptoms: Strained muscles of the middle toe, twisted muscles in the lower leg, spasms or hardening of the muscles in the foot, twisted muscles in the thigh, swelling in the anterior pelvic region, hernia, spasms of the abdominal muscles, strained muscles of the neck and cheek, sudden appearance of mouth awry with inability to close the eye because of muscle spasm, muscles of eyelid flaccid, preventing their opening (a Hot symptom), muscles of the cheek tightly contracted, pulling on the sides of the mouth (a Cold symptom), muscles of the cheek flaccid and unable to contract, causing mouth to appear awry (Hot symptom.)

Leg Greater Yin Spleen Channel

PRIMARY CHANNEL

Begins on the medial tip of the big toe, follows the border of the red & white skin along the medial aspect of the foot.

Passes in front of the medial malleolus and up the leg, along the posterior side of the tibia, crossing at **Sp 6** and then travelling anterior to the Liver channel. Crosses over the medial aspect of the knee and continues up along the anterior medial aspect of the thigh and into the abdomen.

After crossing the Ren channel at **Ren 3 and Ren 4** the channel enters the Spleen and Stomach at **Ren 10**.

Ascends across the diaphragm and intersects the Gallbladder channel at

GB 24, the Liver at **Liv 14**, and the Lung at **Lu 1** and finally reaches the root of the tongue, dispersing over its lower surface.

A branch separates in the stomach region and advances upward across the diaphragm, transporting qi into the **Heart**.

Also directly joins with the **Heart, Lungs, and Intestines**.

CROSSING POINTS: Ren 3, Ren 4, Ren 10, Liv 14, GB 24, Lu 1

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Heaviness in the body or head, general feverishness, fatigued limbs and emaciated muscles, stiffness of the tongue, coldness along the medial side of the leg and knee, edema in the foot or leg.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Abdominal pain, fullness, or distension, diarrhea, incomplete digestion of food, intestinal noises, vomiting, hard lumps in the abdomen, reduced appetite, jaundice, constipation.

DIVERGENT CHANNEL

Separates from primary channel on the thigh, converges with the divergent channel of the Stomach and proceeds upwards to the throat, after which it enters the tongue.

LUO CHANNEL

Separates from the primary channel at **Sp 4**, connects with the Stomach channel at **St 42**, ascends to the abdomen and connects with the Stomach and Intestines.

Symptoms of Excess: Vomiting, diarrhea, sharp intestinal pain.

Symptoms of Deficiency: Abdominal swelling.

GREAT LUO OF THE SPLEEN (Luo of all Luo channels)

From Sp 21, spreads through the hypochondria

Symptoms of Excess: general aches & pains throughout the body

Symptoms of Deficiency: Weakness in the muscles of the limbs and joints

MUSCLE CHANNEL

Starts at the **medial side of the big toe** and ascends across the foot, connecting with the **medial malleolus**. Connects with the medial side of the knee, then traverses the medial aspect of the thigh and connects with the **hip** before joining with the **reproductive organs**.

After crossing the abdomen and connecting with the **umbilicus**, the channel enters the abdominal cavity, connects with the ribs, and disperses through the chest. An internal branch adheres to the **spine**.

Pathological Symptoms: Strained muscles of the big toe, pain in the internal malleolus pain in the muscles of rotation in the ankle, pain in the medial aspect of the knee, pain in the adductor muscles of the thigh, pain due to muscle strain of the groin, pain from strained upper abdominal muscles, pain due to pulled muscles of the mid-thoracic vertebrae.

**The HEART and
SMALL INTESTINE
meridians should be
copied on RED paper**

Arm Lesser Yin Heart Channel

PRIMARY CHANNEL

The channel begins **in its own organ, the Heart**, then travels downward across the diaphragm where it connects with the **Small Intestine**.

A branch of the main channel separates in the Heart and ascends alongside the esophagus to the face where it joins the tissues surrounding the eye.

Another branch goes directly from the Heart to the **Lung**, then slants downward to emerge below the axilla. From here the channel descends along the medial border of the anterior aspect of the upper arm to the antecubital fossa' where it continues downward to the capitate bone proximal to the palm. It then

enters the palm and follows the medial side of the little finger to the finger tip.

The channel directly pins the **Lungs and Kidneys**.

CROSSING POINTS:None noted

Greater Yang Small Intestine Channel

PRIMARY CHANNEL

Starts at the **ulnar side of the tip of the little finger** and ascends along the ulnar side of the hand to the wrist, emerging at the styloid process of the ulna. Goes directly upwards along the posterior aspect of the ulna, passing between the olecranon of the ulna and the medial epicondyle of the humerus at the elbow. Then proceeds along the posterior border of the lateral aspect of the upper arm, emerging behind the shoulder joint and circling round the superior and inferior fossa of the scapula.

At the top of the shoulder it crosses the Bladder channel at points **UB 41** and **UB 11**, and the DU channel at **DU 14**, where the channel turns downward into the supraclavicular fossa and connects with the **Heart**. From here; it descends along the esophagus and crosses the diaphragm to the **Stomach**. Before reaching its associated organ, the **Small Intestine**, the channel intersects the Conception channel internally, and very deep; at points **Ren 13**, and **Ren 12**.

A branch of this channel travels upward from the supraclavicular fossa and crosses the neck and cheek to the outer canthus of the eye, where it meets the Gall Bladder channel at **GB 1**. Then it turns back across the temple and enters the ear at **SI 19**:

Another branch separates from the former branch on the cheek, ascends to the infraorbital region of the eye and then to the inner canthus, where it meets with the Bladder channel at **UB 1**. It then crosses horizontally to the zygomatic region.

Another branch descends to **ST 39, the Lower He-Sea of the Small Intestine**.

This channel connects with the **Heart** and directly joins the **Stomach**.

CROSSING POINTS: UB 1, UB 11, UB 41, GB 1, TB 22, Ren 12, Ren 13

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Numbness of the mouth and tongue, pain in the neck or cheek, sore throat, stiff neck, pain along the lateral aspect of the shoulder and upper arm.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Pain and distension in the lower abdomen, possible extending around the waist or to the genitals, diarrhea or abdominal pain with dry stool and constipation.

DIVERGENT CHANNEL

After separating from the primary channel at the shoulder, this channel enters the axilla, crosses the Heart, and descends to the abdomen, where it connects with the Small intestine.

Arm Greater Yang Small Intestine Channel

LUO CHANNEL

After separating from the primary at **SI 7** this connects with the Heart channel at **Ht 7**. Another branch continues up the arm, crosses the elbow, and joins with the shoulder.

Symptoms of Excess: looseness in the joints, atrophy of the muscles in the elbow and arm

Symptoms of Deficiency: long, finger-shaped warts, scabies

MUSCLE CHANNEL

Begins of the **dorsum of the little finger**, connects at the **wrist**, and ascends along the forearm to the **elbow**, where it connects with the medial condyle of the humerus. From here, the channel proceeds up the arm and connects below the **axilla**.

A branch travels behind the axilla, **surrounds the scapula**, and follows in front of the Bladder muscle channel on the **neck**, connecting **behind the ear**. A branch separates behind the auricle and **enters the ear itself**. After emerging above the auricle, this branch descends across the face and connects **beneath the mandible**, then ascends to connect at the **outer canthus and temple**. Another branch separates at the mandible, ascends **around the teeth** and in front of the ear, connecting at: the **outer canthus** and the **angle of the natural hairline**.

Pathological Symptoms:: stiffness or pain in the muscles of the little finger, pain along the medial and; posterior aspects of the elbow, pain below and on the posterior aspect of the axilla caused by pulled muscles along the medial aspect of the arm, pain in the neck caused by pulled muscles surrounding the scapula, tinnitus related to ear ache, pain reaching from the ear to the mandible, poor vision:

If there are spasms in the muscles of the neck it is due to weakness or atrophy of this muscle channel. Swelling on the neck along the course of this channel may be related to the presence of Cold or Heat.

**The BLADDER and
KIDNEY meridians
should be copied on
BLUE paper**

Leg Greater Yang Bladder Channel

PRIMARY CHANNEL

Begins at the point UB 1 at the inner canthus of the eye and ascends the forehead, intersecting the Du channel at point **DU 24** and the GB channel at point **GB 15**. It then crosses to the vertex and again intersects the Du channel at **DU 20**.

From here, a branch descends to the area above the ear, joining the GB channel at **GB 7, GB 8, and GB 12**.

A vertical branch enters the brain at the vertex and intersects with the Du channel at **DU 17** before emerging and descending along the nape of the neck and the muscles of the medial aspect of the scapula. Here, the Bladder channel meets the Du channel at **DU 14 and DU 13**, after which it continues downward, parallel to the spine, to the lumbar region. The channel then enters the internal cavity via the paravertebral muscles, communicates with the **Kidneys**, and finally joins its associated organ, the **Bladder**.

Another branch separates in the lumbar region, crosses the buttock, and descends to the popliteal fossa of the knee.

Yet another branch separates from the main channel at the back of the neck and descends, parallel to the spine, from the medial spine of the scapula to the gluteal region. Here it crosses the buttock to cross at **GB 30**, and then descends across the lateral posterior aspect of the thigh to join with the other branch of this channel in the popliteal fossa. Continuing downward through the gastrocnemius muscle, the channel emerges behind the external malleolus, then follows the 5th metatarsal bone, crossing its tuberosity to the lateral tip of the little toe at **UB 67**.

The Bladder channel connects behind the knee with its Lower He Sea point, **UB 40**.

This channel connects with the **Kidneys** and is joined directly with the **Brain** and **Heart**.

**CROSSING POINTS: DU 24, DU 20, DU 17, DU 14, DU 13
GB 7, GB 8, GB 10, GB 11, GB 12, GB 15, GB 30**

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Alternating chills and fever, headache, stiff neck, pain in the lumbar region, nasal congestion, diseases of the eye, pain along the back of the leg and foot.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Pain in the lower abdomen, enuresis, retention, of urine, painful urination, mental disorders

DIVERGENT CHANNEL

Diverges from the primary at the popliteal fossa, this channel then travels to a point 5 cun below the sacrum. It then detours to the anal region, connects with the Bladder and disperses in the Kidneys. From here it follows the spine and

disperses in the cardiac region before emerging at the neck where it rejoins the Bladder primary channel.

LUO CHANNEL

Separates from the primary at UB 58, connecting with the Kidney at **Kid 3**.

Symptoms of Excess: nasal congestion, headache, back pain

Symptoms of Deficiency: flaccid or atrophied muscles in the legs or feet, pharyngitis, sudden aphasia

MUSCLE CHANNEL

Originates at the **little toe**. Proceeds upwards to the external malleolus and then to the **knee**. A lower branch extends below the external malleolus to the heel, then ascends to the lateral margin of the popliteal fossa. Another branch separates at the convergence of the medial and lateral heads of the gastrocnemius muscle and ascends to the medial margin of the popliteal fossa. These two branches join in the **gluteal region** and continue upwards **along the side of the spine to the nape of the neck**, where a branch reaches inward to the **root of the tongue**.

Above the neck, the channel joins with the **occipital bone** and proceeds over the head to the bridge of the **nose**. A branch crosses the top of the eye and connects at the side of the nose below. Another branch extends from the lateral margin of the posterior axillary crease to **LI 15** on the shoulder. Another branch crosses below the axilla and over the chest, emerging at the supraclavicular fossa and ascending to **GB 12** behind the ear. Still another branch, after emerging from the supraclavicular fossa, traverses the face to a site **beside the nose**.

Pathological Symptoms: Strained muscles of the big toe, swelling and pain in the heel, spasms in the joints, stiffness along the spine, spasms of the back, inability to raise the arm at the shoulder, stiffness or pulled muscle in the axillary region, strained muscles at the clavicle.

Leg Lesser Yin Kidney Channel

PRIMARY CHANNEL

This channel begins **beneath the little toe**, crosses the sole of the foot, and emerges at Kid 2 on the inferior aspect of the navicular tuberosity at the instep. From here it travels posterior to the medial malleolus, enters the heel, and proceeds upward along the medial aspect of the lower leg where it intersects the Spleen channel at Sp 6. Continues up the leg within the gastrocnemius muscle, it traverses the medial aspect of the popliteal fossa and the medial, posterior aspect of the thigh to the base of the spine where it intersects the Du channel at **DU 1**. Here it threads its way beneath the spine to enter its associated organ, the **Kidney**, and to communicate with the Bladder. It intersects the Conception channel at **Ren 3** and **Ren 4**.

A branch ascends directly from the Kidney, crosses the Liver and diaphragm, enters the **Lung**, and follows the throat to the root of the tongue.

This channel connects with the Bladder and joins directly with the **Liver, Lungs, Heart and Pericardium**.

CROSSING POINTS: Sp 6, DU 1, Ren 3, Ren 4

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Pain along the lower vertebrae, low back pain, coldness in the feet, motor impairment or muscular atrophy of the foot, dryness in the mouth, sore throat, pain in the sole of the foot or along the posterior aspect of the lower leg or thigh.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Vertigo, facial edema, ashen complexion, blurred vision, shortness of breath, drowsiness and irritability, loose stools, chronic diarrhea or constipation, abdominal distension, vomiting, impotence. (Essentials: nocturnal emissions, irregular menses, feverish soles.)

DIVERGENT CHANNEL

After separating from the primary at the popliteal fossa, this channel intersects the divergent channel of the bladder on the thigh. It then proceeds upwards, connecting first with the Kidney before crossing the Girdle channel at about the T-7. Here, the channel ascends to the base of the tongue and continues upwards, emerging at the nape of the neck to converge with the Bladder primary channel.

LUO CHANNEL

Separates from the primary at **Kid 4** and connects with **UB 64**. A branch follows the Kidney channel upward to a point below the perineum, then threads its way through the lumbar vertebrae.

Symptoms of Luo Channel Excess: irritability, depression, enuresis

Symptoms of Luo Channel Deficiency: low back pain

MUSCLE CHANNEL

This channel originates **beneath the little toe**, and together with the Spleen muscle channel, crosses below the internal malleolus and connects at the **heel**, where it **converges with the Bladder muscle channel**. From here it proceeds up the leg and connects at the lower, medial aspect of the **knee**. It then joins with the **Spleen channel** and proceeds upwards along the medial aspect of the thigh to the **genital region**. A branch ascends along the side of the spine to the **nape of the neck**, where it connects with the **occipital bone** and converges with the Bladder muscle channel.

Pathological Symptoms: Twisted muscles on the bottom of the foot, pain or twisted muscles along the course of the channel, as well as other symptoms of disease which appear along the channel, most importantly, those symptoms associated with epilepsy or infantile convulsion.

If the disease is an Exterior condition, it is difficult to flex the head. If the disease is an Interior condition, the head cannot be extended. A Yang disorder is one in which the back will not bend forward. In a Yin disorder the back cannot bend backward.

**The PERICARDIUM
and SAN JIAO
meridians should be
copied on PINK paper**

Arm Absolute Yin Pericardium Channel

PRIMARY CHANNEL

This channel **begins in the chest**, where it joins with the **Pericardium**. It then descends across the diaphragm and into the abdomen, where it connects with the upper, middle, and lower burners of the **San Jiao**.

A branch of the main channel runs along the chest, emerging superficially in the costal region at P-1, three units below the anterior axillary fold before ascending to the inferior aspect of the axilla. From here, it descends along the

medial aspect of the upper arm between the paths of the Lung and Heart channels to the antecubital fossa, and then proceeds down the forearm between the tendons of the palmaris longus and flexor carpi radialis muscles. Entering the palm, it follows the ulnar aspect of the middle finger until it reaches the finger tip.

Another branch separates in the palm and proceeds along the lateral aspect of the 4th finger to the finger tip.

This channel connects with the **San Jiao**.

CROSSING POINTS: none noted

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Stiff neck, spasms in the arm or leg, flushed face, pain in the eyes, subaxillary swelling, spasms and contractures of the elbow and arm, restricting movement, hot palms.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Impaired speech, fainting, irritability, fullness in the chest, motor impairment of the tongue, palpitations, chest pain, mental disorders.

DIVERGENT CHANNEL

Diverges from the primary channel at **P 1**, then enters the chest and communicates with the San Jiao. A branch ascends across the throat, emerging behind the ear where it converges with the San Jiao channel.

LUO CHANNEL

Separates from the primary channel at **P 6** on the wrist, connecting with the San Jiao Channel at **SJ 4**. Another branch spreads out between the two tendons, and follows the Pericardium channel to the Pericardium, after which it connects with the Heart.

Symptoms of Excess: chest pains

Symptoms of Deficiency: irritability

MUSCLE CHANNEL

Begins on the palmar aspect of the **middle finger** and **accompanies the Lung muscle channel upward**, connecting first at the medial aspect of the **elbow**, and again below the **axilla**. From here, the channel descends, spreading over the **ribs** both front and back. A branch enters the body below the axilla and spreads over the chest, connecting at the **diaphragm**.

Pathological Symptoms: Stiff, strained or twisted muscles and pain along the course of the channel. When such muscular strain extends into the chest area, chest pain and spasms may be associated symptoms.

Arm Lesser Yang San Jiao Channel

PRIMARY CHANNEL

Originates on the ulnar aspect of the 4th finger tip, ascends between the 4th and 5th metacarpal bones on the dorsum of the wrist, traverses the forearm between the ulna and radius, and continues upward across the olecranon and the lateral aspect of the upper arm to the shoulder. Here it intersects the Small Intestine channel at **SI 12**, and meets the DU channel at **DU 14** before crossing back over the shoulder. It then crosses the Gall Bladder channel at **GB 21**, from which it enters the supraclavicular fossa and travels to the mid-chest region at point **Ren 17**. From here, the channel joins with the **Pericardium** and descends across the diaphragm to the abdomen, linking with the upper, middle and lower burners of the San Jiao.

A branch of the main channel separates in the chest at **Ren 17** and ascends to emerge superficially from the supraclavicular fossa at the neck. Here it proceeds upward behind the ear, intersecting the Gall Bladder channel at **GB 6** and **GB 4** on the forehead before winding downward across the cheek to below the eye. It intersects the Small Intestine channel at **SI 18**.

Another branch separates behind the auricle and enters the ear. It then emerges in front of the ear where it intersects the Small Intestine channel at **SI 19**, crosses in front of the Gall Bladder channel at **GB 3**, and traverses the cheek to terminate at the outer canthus at **SJ 23**.

The Spiritual Axis states that the San Jiao channel connects with its **Lower (He Sea) Uniting point at UB 39**, adding that this branch of the San Jiao channel emerges from UB 39 and follows the course of the Bladder channel to join with the Bladder.

This channel connects with the **Pericardium**.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

Abdominal distention, hardness and fullness in the lower abdomen, enuresis, frequent urination, edema, dysuria.

DIVERGENT CHANNEL

After separating from the primary channel at the vertex this divergent channel descends into the supraclavicular fossa and across the San Jiao, dispersing in the chest.

LUO CHANNEL

Separates from the primary channel at **SJ 5**, connecting with the Pericardium at **P 7**. Travels up the posterior aspect of the arm and over the shoulder, converging with the Pericardium channel in the chest.

Symptoms of Luo Channel Excess: spasms of the elbow

Symptoms of Luo Channel Deficiency: flaccid muscles in the arm and elbow

MUSCLE CHANNEL

Begins at the tip of the fourth finger and connects at the dorsum of the **wrist**. From here, the channel proceeds upwards along the forearm and connects with the olecranon of the **elbow** before continuing upward along the lateral aspect of the upper arm. It then passes over the **shoulder** to the **neck**, where it joins with the Arm Greater Yang Small Intestine Muscle channel.

A branch separates at the angle of the **mandible** and connects with the **base of the tongue**. Another branch travels upward in front of the ear to the **outer canthus**, then across the temple where it connects at the side of the **forehead**.

Pathological Symptoms: Stiff, strained, or twisted muscles and pain along the course of the channel; curled tongue.

Leg Lesser Yang Gall Bladder Channel

PRIMARY CHANNEL

The channel **begins at the outer canthus of the eye**, and traverses the temple to point **SJ 22**. It then ascends to the corner of the forehead where it intersects **St 8** before descending behind the ear. From here, it proceeds along the neck in front of the San Jiao channel, crosses the Small Intestine channel at **SI 17**, then, at the top of the shoulder, turns back and runs behind the San Jiao channel to intersect the Governing channel at **DU 14** on the spine. Finally, the channel turns downward into the supraclavicular fossa.

One branch of the main channel emerges behind the auricle and enters the ear at **SJ 17**. Emerging in front of the ear, this branch intersects the Small Intestine channel at **St 19** and the Stomach channel at **St 7**, before terminating behind the outer canthus.

Another branch separates at the outer canthus and proceeds downward to **St 5** on the jaw. Then, crossing the San Jiao channel, it returns upward to the infraorbital region before descending again to the neck, where it joins the original channel in the supraclavicular fossa. From here it descends further into the chest, crossing the diaphragm and connecting with the Liver before joining its associated organ, the **Gall Bladder**. Continuing along the inside of the ribs, it emerges in the inguinal region of the lower abdomen and winds around the genitals, submerging again in the hip at **GB 30**.

Yet another vertical branch runs downward from the supraclavicular fossa to the axilla and the lateral aspect of the chest. It crosses the ribs and intersects the Liver channel at **Liv 13** before turning back to the sacral region, where it crosses the Bladder channel at **UB 31 to UB 34**. This branch then descends to the hip joint and continues down the lateral side of the thigh and knee, passing along the anterior aspect of the fibula to its lower end. Here, it crosses in front of the lateral malleolus and traverses the dorsum of the foot, entering the seam between the 4th and 5th metatarsal bones before terminating at the lateral side of the tip of the 4th toe at **GB 44**.

Finally, a branch separates on the dorsum of the foot at **GB 41** and runs between the 1st and 2nd metatarsal bones to the medial tip of the big toe, then crosses under the toenail to join with the Liver channel at **Liv 1**.

Chapter 4 of the Spiritual Axis states that this channel connects with its **Lower Uniting (He Sea) point, GB 34**. This channel is associated with the Gall Bladder and connects with the **Liver**. It is also joined directly with the **Heart**.

CROSSING POINTS: SI 12, SI 17, SI 19, SJ 17, TH 20, SJ 22, St 5, St 7, St 8, Liv 13, U.B. 31-34, DU 14

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN Pain in the ribs, vomiting, bitter taste in the mouth, chest pain.

DIVERGENT CHANNEL

After diverging from the primary channel on the thigh, this channel crosses over and enters the lower abdomen in the pelvic region where it converges with the divergent channel of the Liver. From here it crosses between the lower ribs, connects with the Gall Bladder and spreads through the Liver before proceeding upwards across the Heart and esophagus, dispersing in the face. Here it connects with the eye and rejoins the Gall Bladder primary channel at the outer canthus.

LUO CHANNEL

Separates from the primary channel at **GB 37** on the lateral aspect of the lower leg, connecting with the Liver channel at **Liv 3**. The channel proceeds downward and disperses over the dorsum of the foot.

Symptoms of Luo Channel Excess: fainting

Symptoms of Luo Channel Deficiency: weak and flaccid muscles of the foot, making it difficult to stand

MUSCLE CHANNEL

Begins on the 4th toe, joins with the **external malleolus**, then proceeds up the lateral aspect of the leg where it connects with the **knee**. A branch starts at the upper part of the fibula and ascends along the **thigh**. One of its sub-branches travels anteriorly, joining the thigh above St 32. Another sub-branch travels posteriorly and joins with the **sacrum**.

The main channel proceeds upwards across the **ribs** and anterior to the **axilla**, connecting first in the **breast** region and then above the **collar bone**. Another part of the main channel extends from the axilla upward across the clavicle, emerging in front of the Leg Greater Yang channel, then continues upward **behind the ear to the temple**. From here it continues to the **vertex**, where it joins its bilateral counterpart. A branch descends from the temple across the **cheek** before joining with the bridge of the **nose**. A sub-branch connects with the **outer canthus**.

Pathological Symptoms: Strained muscles of the 4th toe, strained muscles of rotation on the lateral aspect of the knee, inability to bend the knee, muscle spasm in the popliteal fossa, strained muscles of the pelvis, strained muscles of the sacrum extending upward to below the ribs, pain in the hypochondria, strained

Leg Absolute Yin Liver Channel

PRIMARY CHANNEL

Begins on the dorsum of the big toe, continues across the foot to a point one unit in front of the medial malleolus, and proceeds upwards to **Sp 6**, where it intersects the Spleen channel. From here, it continues up the medial aspect of the lower leg, re-crossing the Spleen channel 8 units above the medial malleolus, and thereafter running posterior to that channel over the knee and thigh. Winding around the genitals, the channel enters the lower abdomen where it meets the Conception channel at **Ren 2, Ren 3, and Ren 4**, before skirting the **Stomach** and joining with its associated organ, the **Liver**, and connecting with the **Gall Bladder**. Then the channel continues upwards across the diaphragm and costal region, traverses the neck posterior to the pharynx, and enters the nasopharynx, connecting with the tissues surrounding the eye. Finally, the channel ascends across the forehead and meets the Governing channel at the vertex at **DU 20**.

A branch separates below the eye and encircles the inside of the lips. Another branch separates in the Liver, crosses the diaphragm, and reaches the Lung.

This channel connects with the **Gall Bladder**. It is also joined directly with the **Lungs., Stomach, Kidneys, brain, and other organs**

CROSSING POINTS: Sp 6, Ren 2, Ren 3, Ren 4, Sp 12, Sp 13, DU 20

SYMPTOMS ASSOCIATED WITH THE EXTERNAL COURSE OF THE CHANNEL

Headache, vertigo, blurred vision, tinnitus, fever, spasms in the extremities.

SYMPTOMS ASSOCIATED WITH THE INTERNAL ORGAN

DIVERGENT CHANNEL

Separates from the primary channel on the foot and continues upward to the pubic region, where it converges with the Gall Bladder primary channel.

LUO CHANNEL

After separating from the primary channel at **Liv 5** and connecting with the Gall Bladder at **GB 40**, a branch proceeds up the leg to the genitals.

Symptoms of Luo Channel Excess: Colic, swelling in the testicles

Symptoms of Luo Channel Deficiency: Itching in the pubic region

MUSCLE CHANNEL

Begins on the **dorsum of the big toe**, crosses in front of the internal malleolus and ascends along the medial aspect of the tibia, connecting at the inside of the knee. From here, it proceeds up the medial aspect of the **thigh** to the genitals, where it joins with other muscle channels.

Pathological Symptoms: Strained muscles of the big toe, pain in the area anterior to the internal malleolus, pain at the medial aspect of the knee, pain due to twisted muscles along the medial aspect of the thigh, dysfunction of the genitals (impotence from sexual indulgence, contraction of the genitals if injured by cold, flaccidness if injured by heat).

WARNING!

The following two tests may be hazardous to your mental health. They are fiendishly difficult, and were deliberately designed to be so. You will never, in reality, encounter midterms or finals as difficult as these two. (if you do, please send them to us and we will include them in our next edition.)

However, if you can successfully negotiate these, you can get through ANY test of point functions.

Use them as study aids for differentiating similar types of points. The Midterm covers functions up through the Bladder channel, the Final is comprehensive.

Good luck and don't sweat it!

ACUPUNKS AND HERB-NERDS!

Lets face it, no one understands what you're going through.

Your teachers don't understand! (Hell, they've already *got* their acupuncture licenses.) "" Your friends and spouses all think you're nuts. The local M.D.eity thinks you're a quack! (Hopefully the Roast Duck kind, but still a quack.)

You're driving yourself crazy trying to figure out "How come the diagnosis sounds just like a weather report?"

You wonder how any sane person could possibly want to make a living by putting pins in people and feeding them roots and bugs and god knows what else.

No one understands...

Except us.

Take heart. We at Roast Duck Productions® understand, and we're here to help. But before we can help you, you need to help us first.

The Acupuncture Point Book was designed specifically for you, the student of TCM. We are currently producing the second edition of this fine work, and we want you to take this opportunity to let us know how you feel about it.

What did you like about the book? What did you dislike?

What would you like to see included in the new version? What's missing? How can we make the book more "user friendly"?

Should we publish the x-rated descriptions you sent us about those late-night point location sessions?

Do you use the quizzes? The tests?

What tools or techniques have you found useful as you wade through the swamp of Chinese esoterica we're all so familiar with?

Any good books you know of for interesting point information? Have you made any interesting discoveries or connections?

We're specifically looking for any point location gimmicks, tips, or ideas that you might've picked up in your travels.

Many a starry-eyed idealist has entered the gauntlet of acupuncture school only to emerge four years later as a quivering, shambling mass of tangled qi and reckless blood. Believe me, it's not a pretty sight.

They need our help.

Listen. The world's not getting any smarter. Those poor souls who will soon be following in your footsteps will need the benefit of your superior wisdom to help them get through their exams.

Please don't let them down.

Send your letters, comments, and flashes of insight to:

The Honorable Reverend Herr Doktor Lancelot Kitsch, Esq.
