

Nei Jing Techniques: Written 3-5k years ago (Nobody knows who really wrote it)	
- Acupuncture is older than herbs [Zhang Zhong Jing] - Acupuncture: Very old baby. It's very old but we still don't know how it works	
• Ultimate Goal	Fewer needles, stronger Qi, better results
• Manipulation Goal	1: De Qi, 2: Open meridians, 3: Balance yin/yang

5 Needling Techniques [Ling Shu – Guan Zhen] Developed based on 5 Organ Differentiation System and/or 5 Constitutions			
Technique	Definition	Method	Indication
1. Semi Needling [LU]	- Shallow needling or needling skin only - Many Japanese techniques - Lung conditions → skin, surface - Most pain sensation on skin because skin has most number of nerves - Thin needles → more pain!	- Needle inserted only into skin Quickly withdrawn like pulling out a piece of body hair	- Superficial Exterior Wind & cold attack - Fever, chills, wheezing, other lung conditions & disorders (urticaria, hives) - Like Ma Huang Tang, but earlier
2. Leopard spot [HT]	Multiple bleeding locations, making skin look like leopard skin pattern	- Multiple sparse blood-letting needling around one spot/point - Bleeding hospital for cancer	- Skin disorders with redness, swelling, heat, toxins in blood level, pain - HT related: blood-involving technique → HT controls blood & vessels
3. Joint needling [LV]	Needling tendons & ligaments around joints for muscular/tendon problems, trigger points	- Needling tender & diseased points on tendons around joints or at muscle ends Avoid inserting into vessels & causing bleeding - Thicker needles more effective	- Tendon Bi, muscular strains, joint sprains - LV: LV governs tendons
4. He Gu Needling [SP]	- Needling into muscular regions Strongest Qi obtained by needling into muscular level - Gu means convergence of major muscles	- Deeply insert needle into center of the big muscles, then insert 2 other needles on both sides of 1st needle - Make pattern like chicken foot - Strong technique!!!	- Muscle Bi, muscular pain, spasm, tingling, atrophy - SP: SP governs muscles
5. Shu Needling [KD]	- Deeply straight in & straight out - Deep technique	- Insert needle perpendicularly - Deep to bone level, withdraw straight	- Bone Bi, Bone spurs, osteoporosis, osteoarthritis - Conditions located in deep level

9 Needling Techniques [Ling Shu – Guan Zhen] 9 Techniques applied for 9 Conditions			
Technique	Definition	Method	Indication
1. Shu Needling	- Needling 5 Shu points & Back Shu Points 5 Shu: Jing Well, Ying Spring, Shu Stream, Jing River, He Sea [5 Shu all go to center] - LI 4 & LV 3, LI 10 & ST 36	- Choose appropriate points from 5 Shu and Back Shu points located at involved meridians - Running cupping/gua sha along back shu points & needle points with color change	- Zang Fu Organ disorders - Deficiency: Sunken, pale - Excess: red, swollen
2. Distal Needling	- Needling distal points to treat disorders - GB 41: Migraine, GB 37: Eyes - UB 67: Turn breach baby, ST 40: Phlegm - DU 26: Back pain, LU 10: Lower back - SI 3: Neck	- Choose points located in distal part of the meridian - Choose lower (upper) to treat upper (lower) conditions	Painful & tough conditions that respond poorly to local treatment
3. Meridian Needling	- Needling local points from affected meridian - Needling Luo Connecting points of affected meridian	- Needle local points from involved meridian [Yuan (affected) → Luo (paired)] - LU/LI, SP/ST	Qi & Blood stagnation, Blood stasis, lumps, nodules
4. Collateral Needling	- Needling collaterals (tiny veins) - Similar to leopard spot needling	- Needling collaterals (tiny veins) superficially to induce bleeding - Get rid of congested blood	- Excess (Shi) & Heat type conditions - Long Term stagnation & stasis - Phlegm misting heart, stroke, - Swelling, Boils, insect bites
5. Muscular Needling	Insert needle directly into muscles or grooves between major muscles	Directly insert needle (relatively long & thick) directly into muscles	- Muscular pain, flaccidity, atrophy, spasm, - Twitching, myofascitis
6. Major Reducing Needling	Needling purulent swellings, abscesses, or hematoma to eliminate and drain pus or stagnant blood	Incise with knife-shaped needle to puncture with a thick & large needle to eliminate or drain pus or stagnant blood	- Abscess, hematoma, purulent swelling - Don't do this in real life! Refer out!
7. Cutaneous Needling	- Stimulates skin by mildly multi-needling - Like poking with hairs	- Needle shallowly on or within skin - Not deep into muscles - Ex: 7 star hammer, roller	- Superficial disorders, chronic conditions - Pediatric diseases
8. Opposite Side Needling	- Cross (mutual) Needling • R Shoulder → L Hip, R Ankle → L Wrist • R Knee → L Knee	- Needle Right side for disorders on Left side & vice versa - Make both sides even	Stroke, Headache, Migraines, frozen shoulder, sore throat, sciatica, soft tissue damage
9. Cauterized Needling	Needling with cauterized needles	- Burn needle body until red (1/3 – ½) - Quickly insert into point, remove quickly	- Cold Bi, scrofula, carbuncle - Don't do much anymore - Some hospitals in China still do it

12 Needling Techniques [Ling Shu – Guan Zhen] Correspond to the conditions of 12 meridians			
Technique	Definition	Method	Indication
1. Symmetrical Needling (AKA Yin/Yang, Shu-Mu Needling)	- Two needles inserted in front & back - Ex: UB 13 & LU 1 for Lung disorders	- Insert one needle in the Back Shu (or around one tender point) - Insert another needle in the Front Mu (or another tender point)	- Zang Fu disorders - Later renamed Shu-Mu Needling - Positions: Sitting, side-lying
2. Repeat Needling	- Needling repeatedly into Ashi points - Until patient feels Qi (No Qi, No results) - Most common Japanese style in/out - Shallow, use superficial meridians to impact root	- Insert one needle into Ashi point & manipulate. - If pain remains: Remove first needle & insert another needle into nearby point	- Conditions with tender points or wandering pain - Stomachache, arthritis - Also applied for stuck needle
3. Rehabilitating Needling	- Restores body function by needling - ST 38: Frozen shoulder - Yao Tong Xue: Lower back pain	- Insert needle into or around painful or spasmodic area & De Qi - Have patient move joint & limbs to relieve spasms to gradually restore fxn	- Tendon/ligament Bi, - Muscular spasms & cramps
4. Three Needling	Treating condition by needling point/area with 3 needles	- Insert one needle in center of point - Insert one needle in each side of needle - All needles point in same direction	- Deep pain over a small area - One spot so tender! Piriformis, sciatica
5. Five (Surrounded) Needling	Yang means Shallow & Superficial	- Shallowly insert one needle at the center of the point/area - Insert needles on each of other 4 corners	- Skin & superficial Bi in large area - Scar, rash, pimples, neuropathy, numbness [Initial image: 7 star hammer]
6. Direct needling	- Needling directly into expected point/place "Running Needle"	Pinch skin first, then insert needle transversely & directly to expected point/place where disease located	Skin & superficial Bi, collateral disorders
7. Shu Needling	Guiding/conducting/transporting Yang Excess (shi) from Yin to surface & eliminating it	Insert needle perpendicularly, deep to diseased area & Deqi, then withdraw needle slowly (draw bad Qi out)	Excess (Shi), Heat conditions, toxins
8. Short Needling	- Needling close to bone. - Similar to Shu Needling in 5 Needling Techniques (1st group)	Insert needle & conduct it slowly with a mild wiggle deep & close to bone or affected area & manipulate it	Bone Bi, deep-located disorders
9. Superficial Needling	- Needling superficially - Bleeding is a good way to move blood - Cupping makes blood pool → Really moves the blood	Insert needle obliquely & superficially around point	Muscular cramps due to cold invasion
10. Yin Needling	- Needling symmetrically at involved meridian on both sides - Stronger & more effect	- Choose symmetric (left & right) points to needle - Yin: Even #, Yang: Odd #	- Yin & Cold conditions - All kinds of conditions
11. Accompanied Needling	2 needles keeping each other company	- Insert one needle perpendicularly - Insert another nearby, obliquely towards the first one	- Fixed Bi, Painful Bi - Stubborn painful conditions
12. Repeatedly sparse needling	- Multi-needling → they help each other - Original image of "3 edged needling"	Multiple insertions, withdraw needle perpendicular & shallowly to cause bleeding	- Skin conditions: carbuncle, furuncle, erysipelas (red patches) - Blood Stasis, hematoma (expel old blood)

Single Techniques			
Technique	Description	Method [** = After Insertion & Deqi,]	Indication
1. Swaying (Bai Fa)	- Very Gentle, (1st date) - Mild, small angle (30-50 degrees) - Like a clock or gentle breeze	** Swing needle handle from left to right or back & forth to promote flow of Qi	Promote Qi for people that have weak Qi
2. Swirling (Pan Fa)	- Slightly more vigorous (2nd or 3rd Date) - Clockwise: Tonify - Counterclockwise: Reduce	** Move needle in circle (360) to reinforce Qi stimulation	Loose tissues, not for tight muscular areas (lower abdomen)
3. Tremoring (Zhenchan Fa)	- Finger power - High frequency, small range	** Slightly & quickly thrust, lift & rotate needle to tremor	- Reinforce Deqi & promote flow of Qi - Gradually motivate the Qi
4. Pestling (Dao Fa)	- Wrist power (like bird pecking food) - Not too bad, very gently	** Quickly & mildly lift, then forcefully thrust needle in same & small area	Reinforce Deqi & keep Qi for a longer time
5. Pushing & Rotation (Nian Tui Fa)	- Very Strong → First fight! - Mild lift, forceful thrust - Repeat until Qi flows to expected area.	** (But Qi is weak), mildly lift needle under skin & pinpoint to affected area, then push & rotate needle forward to expected area.	- Push Qi to area where you want the Qi - Rotate from posterior transverse lines to belly of thumb.
6. Knocking (Qiao Fa)	- More gentle - Finger power, not hand/arm	** Knock tail of needle with fingers (index & middle)	- Reinforce & Deepen Qi - Automatically tonifying for weak patients
7. Flying (Fei Fa)	- Very Strong - Don't keep flying → Too much	** Quickly rotate needle & release like bird flying	Reinforces stimulation & promotes flow of Qi
8. Bending (Dao Fa)	Gentle	** Lift needle to upper level, bend & direct needle to intended area	Manipulate needle until Qi arrives to affected area
9. Picking (Ti Fa)	- Subtle - Use Japanese needles (more precise)	** Hold & slightly bend needle in all directions, like searching for something	Find the strongest Qi spot
10. Fixed Flicking (Nu Fa)	Hold & manipulate needle to keep Qi flow to desirable direction/location.	** Hold needle with thumb & index fingers, press & flick needle with middle finger, or bend needle to one side like bow.	To direct Qi in different directions, bend needle accordingly.

Midterm	
1. Role of techniques in acupuncture treatment ➤ Why techniques important in therapeutic effect ➤ Compare with herbs	•
2. General Goal in application of techniques? Why ➤ Goal in manipulation?	• 1: De Qi • 2: Open meridians • 3: Balance yin/yang
3. Fill in blanks ➤ Leopard spot ➤ Joint ➤ Hegu [Chicken foot] ➤ Shu (5 Needling techniques)	•
4. 5 Needling techniques developed based on what?	• Developed based on 5 Organ Differentiation System and/or 5 Constitutions
5. 12 Needles respond to conditions of what?	• Correspond to the conditions of 12 meridians
6. Strong acupuncture stimulation → What effect?	• Reducing effect
7. Mild acupuncture stimulation → What effect?	• Tonifying effect (gentle & consistent, simmering)
8. Running technique → Cases differentiated what? ➤ Today we talked (Wei Qi?) ➤ I have no clue what this is referring to . . .	• Direct needling???
9. Which technique is in 5, 9, 12 → Different Indications	• Shu Needling
10. Which not a bloodletting technique?	Bleeding techniques: • 5 Needle ♦ Leopard spot • 9 Needle ♦ Collateral ♦ Major Reducing Needling • 12 Needle ♦ Superficial? ♦ Repeatedly sparse needling
11. 7 star needle origin	• Five (Surrounded) Needling
12. Running needle technique → immune support along where?	• Du, UB, HTJJ
13. Which body tissue obtains strongest De qi?	• Muscles
14. Hands on: Move Qi	•
